- Dashboard & insights
- Coverage gap alerts
- Mobile access
- Best Practice integration
- Email support
- Multi-location support
- Advanced reporting
- Team utilisation reporting
- Historical trend analysis
- Priority support
- Quarterly optimisation review

## Why Medari?

Most workforce software tells you who is working.

Medari helps you understand:

- Do we have enough staff for expected demand?
- Are we overstaffed or understaffed?
- Do we have enough rooms available?
- Where are operational bottlenecks forming?
- How can we improve utilisation without increasing payroll?

Medari aligns workforce capacity, clinical sessions, and room allocation with real patient demand.

## ROI

### One Better Staffing Decision Can Pay for Medari

|                                                                                                                                                                                       |                                                                                                                                                                             |

## Common Questions

### [Do I need to be using Best Practice?](#)

Currently, Medari integrates with Best Practice Software. Additional Practice Management System integrations are planned in future releases.

### [How does the 30-day free trial work?](#)

Start your free trial with a valid credit card. You won't be charged during the trial period and can cancel at any time before your trial ends.

Is there a lock-in contract?

No. All plans are month-to-month unless you choose annual billing.

How long does setup take?

Most Practices can be up and running within minutes.

Simply connect your Practice, import your team, and Medari will begin analysing historical activity to generate workforce insights.

Does Medari roster doctors?

No. Medari does not treat GPs as employees or create GP rosters.

Instead, Medari helps Practices manage:

- GP availability
- Clinical sessions
- Room allocation
- Workforce capacity

This ensures workforce planning aligns with how healthcare Practices actually operate.

What staff can Medari help manage?

Medari supports workforce planning for:

- Receptionists
- Nurses
- Practice Managers
- Administration teams
- Allied Health Professionals
- Specialists
- Contractors
- Support staff

### How does demand forecasting work?

Medari analyses historical Practice activity and appointment patterns to predict future demand.

This helps identify:

- Peak periods
- Quiet periods
- Staffing gaps
- Capacity constraints

So you can make workforce decisions before problems occur.

### What happens if I have no historical data?

Medari supports both cold start and warm start Practices.

For new Practices, you can enter workforce preferences, availability, operational rules, and target hours.

As Medari collects data, forecasting and recommendations become increasingly accurate.

### Can Medari manage multiple locations?

Yes. Multi-location workforce planning and reporting.

### Can staff access Medari on mobile?

Yes. Staff can view schedules, update availability, submit timesheets, and receive notifications from any device.

### Is my data secure?

Yes.

Medari follows industry security standards and only accesses the data required to provide workforce planning and forecasting functionality. Data remains owned by the Practice.

### How is Medari different from rostering software?

Traditional rostering software answers:

"Who is working?"

Medari answers:

"Do I have the right people, in the right place, at the right time?"

Medari combines workforce planning, demand forecasting, session planning, and room allocation into a single platform designed specifically for operational decision-making.

### What kind of return on investment can I expect?

Most Practices see value through:

- Reduced overstaffing
- Better workforce utilisation
- Improved room utilisation
- Less time spent building schedules
- Better visibility into workforce demand

For many Practices, one better staffing decision can cover the monthly subscription cost.

### Can I cancel anytime?

Yes.

You can cancel at any time before your next billing cycle. There are no lock-in contracts.
