The Problem Most healthcare organisations have systems for: • Appointments • Billing • Clinical records • Patient communication But very few have a system for workforce planning. As a result: • Reception teams become overwhelmed • Nurses are stretched during peak periods • Rooms sit idle while other areas are overloaded • Managers spend hours adjusting schedules • Staffing decisions are made based on instinct Medari changes that.	What Is Medari? Medari is a workforce planning and operational intelligence platform built specifically for healthcare. By analysing historical demand, workforce availability, sessions, and operational capacity, Medari helps Practices make smarter staffing decisions before problems occur.
